 - ESMIG (Connectivity layer)
 - CRDM (Reference data)
 - BILL (Billing)
 - BDM (Business day management)
 - DWH (Data warehouse)
 - LEA (Legal archiving)

Release 6.0 (continued)

Release 6.0 (continued)

- On 16 March, the CSG and MIB confirmed the rescheduling of both (i) the start of user testing for release 6.0 of T2S and (ii) the deployment of the release in the production environment. User testing started on 2 May 2022, and the release is set to be deployed in the production environment on 2 July 2022
- ESMIG and NRO GSD connectivity status: Monitoring exercise between October 2021 and May 2022. The CSG is concerned on the level of readiness and the number of DiCoAs not completed successful testing.

All DCPs are strongly encouraged to engage on testing their connectivity to ESMIG and NRO GSD for both pre-production and Production environments.

Release 6.0 (continued)

For presentation

- The situation is characterised by a very high number of RDs affecting especially the new Common components interfaces, mainly instability of CRDM and BILL (missing T2S messages (expected responses on reference data queries, on business day queries or billing messages))
- The MIB and CSG took note of the critical items raised by the PMG and the 4CB action plan in addressing these, by e.g. weekly deployments of fixes of several RDs
- Eurosystem confirms its commitment for increased support during the stabilisation period after the go-live of T2S R6.0
