1) Data coverage for euro area residents is estimated to be around 95% of total issuance.

2) "Short-term" means securities with an original maturity of one year or less (in exceptional cases two years or less). Securities with a longer original maturity, or with optional maturity dates, the latest of which is more than one year away, or with indefinite maturity dates, are classified as long-term.

3) The residual difference between total long-term debt securities and fixed and variable rate long-term debt securities consists of zero coupon bonds and revaluation effects.

4) Monthly averages of the transactions during this period.

5) Annual growth rates are based on financial transactions that occur when an institutional unit incurs or redeems liabilities. The annual growth rates therefore exclude the impact of reclassifications, revaluations, exchange rate variations and any other changes which do not arise from transactions.

1) Data coverage for euro area residents is estimated to be around 95% of total issuance.
2) Corresponding ESA 95 sector codes: MFIs (including Eurosystem) comprises the ECB and the national central banks of the euro area (S.121) and other monetary financial institutions (S.122); financial corporations other than MFIs comprises other financial intermediaries (S.123), financial auxiliaries (S.124) and insurance corporations and pension funds (S.125); non-financial corporations (S.11); central government (S.1311); other general government comprises state government (S.1312), local government (S.1313) and social security funds (S.1314).
3) Three-month annualised growth rates are based on financial transactions that occur when an institutional unit incurs or redeems liabilities. The three-month annualised growth rates therefore exclude the impact of reclassifications, revaluations, exchange rate variations and any other changes which do not arise from transactions. The rates are annualised to allow direct comparisons with annual rates (please note that the non-adjusted rates presented in Table 2 are almost identical to seasonally adjusted annual rates).
