Survey on credit terms and conditions in euro-denominated securities financing and OTC derivatives markets (SESFOD)

June 2019

The Eurosystem conducts a quarterly qualitative survey on credit terms and conditions in euro-denominated securities financing transaction and over-the-counter (OTC) derivatives markets. This survey is a follow-up to the recommendation in the Committee on the Global Financial System study group report on “The role of margin requirements and haircuts in procyclicality”, published in March 2010. The survey is part of an international initiative to collect information on trends in the credit terms offered by firms in the wholesale markets, and insights into the main drivers of these trends. The information collected is valuable for financial stability, market functioning and monetary policy objectives.

The survey questions are grouped into three sections:

1. **Counterparty types** – credit terms and conditions for various counterparty types in both securities financing and OTC derivatives markets;

2. **Securities financing** – financing conditions for various collateral types;

3. **Non-centrally cleared OTC derivatives** – credit terms and conditions for various derivatives types.

The survey focuses on **euro-denominated** instruments in securities financing and OTC derivatives markets. For securities financing, this refers to the euro-denominated securities against which financing is provided, rather than the currency of the loan. For OTC derivatives, at least one of the legs of the contract should be denominated in euro.

Survey participants are **large banks and dealers** active in targeted euro-denominated markets.

Reporting institutions should report on their **global credit terms** – the survey is aimed at the senior credit officers responsible for having an overview of the management of credit risks. Where material differences exist across different business areas, for example between traditional prime brokerage and OTC derivatives, answers should refer to the business area generating the most exposure.

Credit terms are reported from the perspective of the firm as a **supplier of credit to customers** (rather than as a receiver of credit from other firms).

The questions focus on how terms have tightened or eased over the past three months, regardless of longer-term norms, why they have changed, and expectations for the future. Firms are encouraged to answer all questions, unless some market segments are of marginal importance to the firm's business.

The font colour of the reported net percentage of respondents, either blue or red, reflects, respectively, **tightening/deterioration** or **easing/improvement** of credit terms and conditions in targeted markets.

June 2019 SESFOD results

(Reference period from March to May 2019)

The June 2019 survey on credit terms and conditions in euro-denominated securities financing and OTC derivatives markets (SESFOD) reports qualitative changes in credit terms between March and May 2019. Responses were collected from a panel of 28 large banks, comprising 14 euro area banks and 14 banks with head offices outside the euro area.

Highlights

In both the securities financing market and the OTC derivatives market, credit terms offered to almost all counterparties eased between March and May 2019. An improvement in liquidity conditions and market functioning, stronger competitive pressures from other institutions and increased balance sheet availability were the main drivers of this development. Looking ahead, a small net percentage of respondents expect price terms to continue easing for most counterparty types over the following three months.

In line with previous SESFOD survey results, attention devoted by responding institutions to concentrated credit exposures to large banks and CCPs increased further in the review period.

As regards the provision of finance collateralised by euro-denominated securities, the maximum amount and maturity of funding continued to decline, especially for funding secured with government and covered bonds. At the same time, financing rates/spreads decreased for funding secured with most types of collateral – with few exceptions – and demand for funding continued its declining trend across all types of collateral.

For non-centrally cleared OTC derivatives, conditions remain broadly unchanged.

Counterparty types

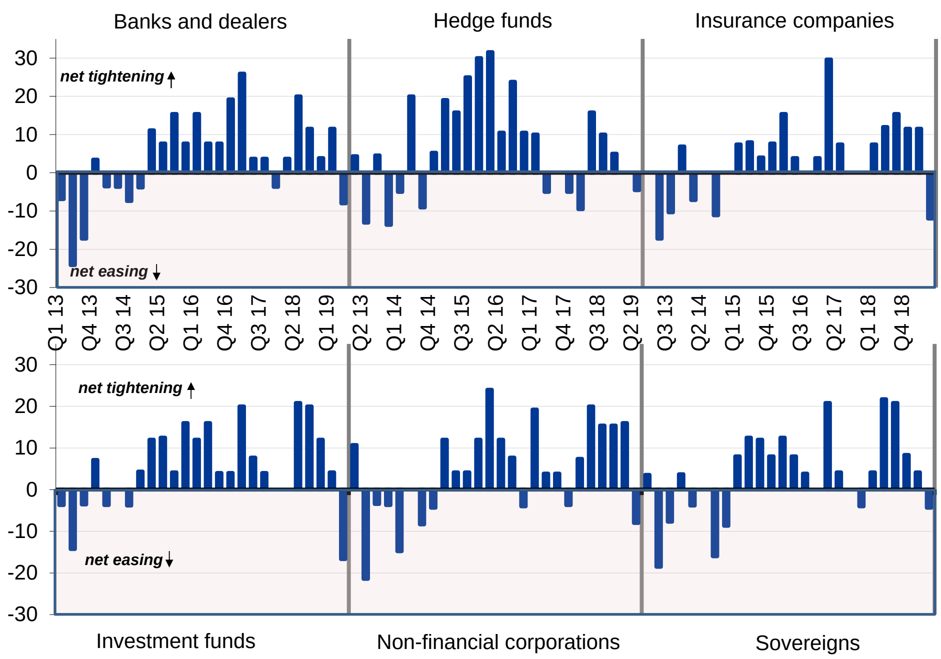
Credit terms and conditions eased. Responses to the June 2019 survey suggest that, on balance, credit terms offered to counterparties generally eased for both securities financing and OTC derivatives transactions in the reference period. The overall net easing was predominantly reflected in price terms offered to investment funds, insurance companies and non-financial corporations (see Chart A). This is largely in line with the easing expectations expressed in the March 2019 survey.

Respondents which reported an easing of credit terms and conditions attributed this to an improvement in general liquidity and market functioning, combined with competitive pressures from other institutions and greater availability of balance sheet capacity at their own institution.

Chart A

Changes in overall credit terms offered to counterparties across all transaction types

(Q1 2013 – Q2 2019; net percentage of survey respondents)



Source: ECB.
Note: Net percentages are defined as the difference between the percentage of respondents reporting "tightened somewhat" or "tightened considerably" and the percentage reporting "eased somewhat" or "eased considerably".

Looking ahead, a small net percentage of respondents expect price terms to ease for many counterparty types over the next three months. The strongest expectations were expressed in relation to banks and dealers, insurance companies, non-financial corporations and hedge funds. Overall terms and conditions for sovereigns are expected to tighten somewhat.

The practices of CCPs did not, on balance, influence credit terms over the review period.

Attention devoted by responding institutions to the management of concentrated credit exposures to large banks and CCPs increased further in the review period. Reporting banks indicated that their institutions had further increased the amount of resources and attention they devoted to the management of concentrated credit exposures, both for CCPs (7% of respondents in net terms) and for banks and dealers (14% of respondents in net terms), following the significant increases reported in the previous SESFOD survey.

Use of financial leverage remained broadly unchanged. Respondents reported that the use of financial leverage remained unchanged on balance for hedge funds and investment funds. However, a small net percentage of respondents reported an increase in the use of financial leverage by insurance companies.

Pressure from clients to obtain more favourable conditions increased over the reference period. Respondents reported that all counterparty types had intensified their efforts to negotiate more favourable price and non-price terms over the past three months. This represents a continuation of the developments observed in previous survey rounds.

Valuation disputes with non-financial corporate counterparties declined on balance, while the volume of disputes with banks and hedge funds increased slightly.

Securities financing

Maximum amount of funding: Responses to the June 2019 survey point to a continuing decline in the maximum amount of funding secured using government bonds, asset-backed securities, covered bonds and, to a lesser extent, equities.

Maximum maturity of funding: Survey respondents also reported a decline in the maximum maturity of funding secured using euro-denominated government bonds and covered bonds, for both average and most-favoured clients.

Haircuts: For both average and most-favoured clients, survey respondents reported broadly unchanged haircuts for almost all types of euro-denominated collateral covered by the survey. Transactions secured with asset-backed securities and high-quality financial corporate bonds constitute exceptions, in that some respondents reported a decline in haircuts.

Financing rates/spreads: For average clients, small net percentages of respondents reported declines in financing rates/spreads for funding secured by almost all types of collateral. The only exception to this was high-yield corporate bonds, for which a small net percentage of respondents reported an increase in financing rates/spreads. For most-favoured clients, small net percentages of respondents likewise reported declines in financing rates/spreads for many collateral types, but there were two notable exceptions: for funding secured by equities, a significantly larger net percentage of respondents (21%) reported a decline in financing rates/spreads (following a similar development in the previous SESFOD survey); and for funding secured by domestic government bonds, a small net percentage of respondents (6%) reported that funding rates/spreads had increased.

Use of CCPs: Responses to the June 2019 survey indicated only small changes in the use of CCPs for most types of collateral. Notably, several respondents indicated that their average clients had reduced their use of CCPs for funding secured by high-quality corporate bonds.

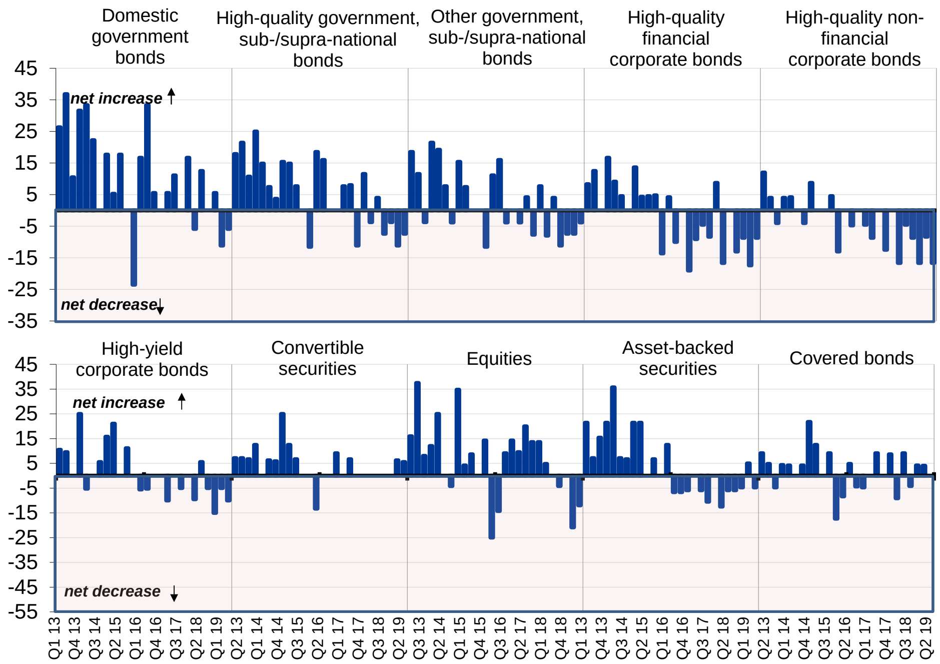
Covenants and triggers: For most-favoured clients, survey responses show that covenants and triggers for funding secured by high-quality financial and non-financial corporate bonds, high-yield corporate bonds and convertible securities eased somewhat over the review period.

Demand for funding: Respondents reported further declines in demand for funding across all types of collateral (see Chart B). A particularly pronounced decline was reported for funding secured using corporate bonds. For most types of collateral, overall demand for funding has now fallen in three consecutive reference periods.

Chart B

Changes in demand for funding

(Q1 2013 – Q2 2019; net percentage of survey respondents)



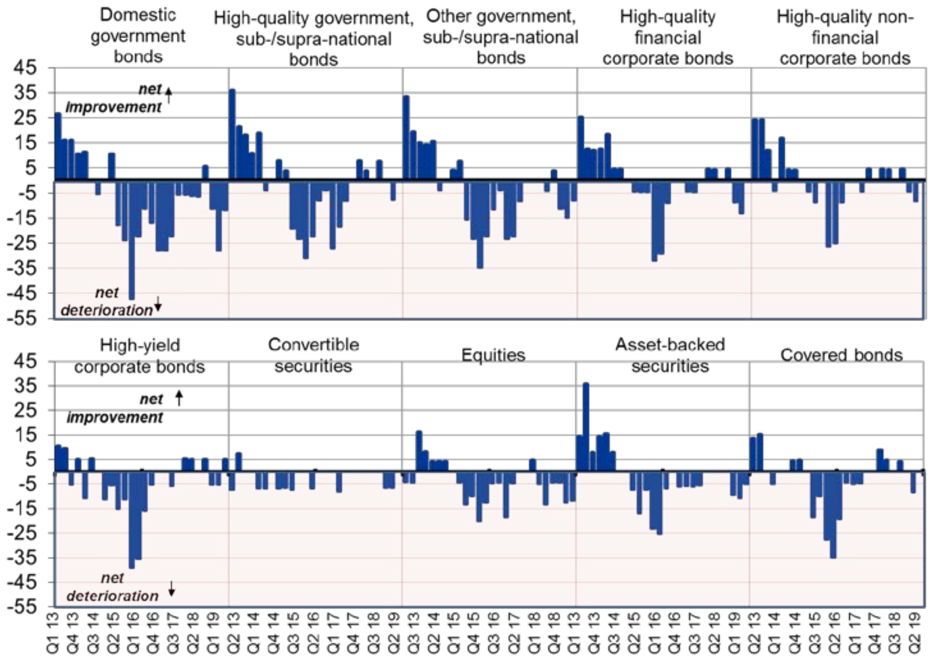
Source: ECB.
Note: Net percentages are defined as the difference between the percentage of respondents reporting "increased somewhat" or "increased considerably" and the percentage reporting "decreased somewhat" or "decreased considerably".

Liquidity of collateral: A number of respondents reported a deterioration in the liquidity and functioning of the markets for equities and some types of government bond (see Chart C). Respondents considered that conditions in other markets remained broadly unchanged.

Chart C

Changes in liquidity and functioning of markets

(Q1 2013 – Q2 2019; net percentage of survey respondents)



Source: ECB.
Note: Net percentages are defined as the difference between the percentage of respondents reporting "improved somewhat" or "improved considerably" and the percentage reporting "deteriorated somewhat" or "deteriorated considerably".

Collateral valuation disputes: As in previous surveys, respondents indicated that the volume, persistence and duration of valuation disputes had remained essentially unchanged over the three-month reference period for the various types of collateral covered by the survey.

Non-centrally cleared OTC derivatives

On balance, initial margin requirements remained broadly unchanged. However, a small net percentage of respondents reported that their institutions had increased initial margin requirements for OTC foreign exchange derivatives, commodity derivatives and total return swaps referencing non-securities.

Credit limits remained broadly unchanged. Respondents reported that the maximum amount of exposure and the maximum maturity of trades remained essentially unchanged for all types of derivative.

Liquidity and trading remained broadly unchanged. However, survey respondents indicated that liquidity and trading had, on balance, deteriorated slightly for foreign exchange derivatives, derivatives on credit referencing structured credit products and total return swaps referencing non-securities.

Valuation disputes remained broadly unchanged. The majority of respondents reported that the volume of disputes relating to the valuation of OTC derivatives contracts covered by the survey was unchanged from the previous reference period. One exception in this regard was equity derivatives, for which respondents to the June 2019 survey reported net increases in both the volume (13%) and the duration and persistence (7%) of valuation disputes.

Respondents reported tightening of non-price terms in new or renegotiated master agreements. In net terms, 7% of survey respondents reported that there had been some tightening of margin call practices. That was similar to the tightening reported in the previous survey. A small net percentage of respondents also reported that other documentation features in new or renegotiated OTC derivatives master agreements had been tightened somewhat.

The posting of non-standard collateral increased. A small net percentage of survey respondents reported that the posting of non-standard collateral had increased somewhat, following the small net increase reported in the previous survey round.

1 Counterparty types

1.1 Realised and expected changes in price and non-price credit terms

Over the past three months, how have the [price] terms offered to [counterparty type/ all counterparties above] as reflected across the entire spectrum of securities financing and OTC derivatives transaction types changed, regardless of [non-price] terms?

Over the past three months, how have the [non-price] terms offered to [counterparty type/ all counterparties above] as reflected across the entire spectrum of securities financing and OTC derivatives transaction types changed, regardless of [price] terms?

Over the past three months, how have the [price and non-price] terms offered to [counterparty type/ all counterparties above] as reflected across the entire spectrum of securities financing and OTC derivatives transaction types changed [overall]?

1.2 Reasons for changes in price and non-price credit terms (continued)

To what extent have changes in the practices of [central counterparties], including margin requirements and haircuts, influenced the credit terms your institution applies to clients on bilateral transactions which are not cleared?

Table 9

(in percentages, except for the total number of answers)

Price and non-price terms	Contributed considerably to tightening	Contributed somewhat to tightening	Neutral contribution	Contributed somewhat to easing	Contributed considerably to easing	Net percentage Mar. 2019	Net percentage Jun. 2019	Total number of answers
Practices of CCPs	0	6	88	6	0	+8	**0**	17

Note: The net percentage is defined as the difference between the percentage of respondents reporting "contributed considerably to tightening" or "contributed somewhat to tightening" and those reporting "contributed somewhat to easing" and "contributed considerably to easing".

1.3 Resources and attention to the management of concentrated credit exposures

Over the past three months, how has the amount of resources and attention your firm devotes to the management of concentrated credit exposures to [large banks and dealers/ central counterparties] changed?

Table 10

(in percentages, except for the total number of answers)

Management of credit exposures	Decreased considerably	Decreased somewhat	Remained basically unchanged	Increased somewhat	Increased considerably	Net percentage Mar. 2019	Net percentage Jun. 2019	Total number of answers
Banks and dealers	0	0	86	11	4	-16	-14	28
Central counterparties	0	4	86	7	4	-5	-7	28

Note: The net percentage is defined as the difference between the percentage of respondents reporting "decreased considerably" or "decreased somewhat" and those reporting "increased somewhat" and "increased considerably".

1.4 Leverage

Considering the entire range of transactions facilitated by your institution for such clients, how has the use of financial leverage by [hedge funds/ insurance companies/ investment funds (incl. ETFs), pension plans and other institutional investment pools] changed over the past three months?

Considering the entire range of transactions facilitated by your institution for [hedge funds], how has the availability of additional (and currently unutilised) financial leverage under agreements currently in place (for example, under prime brokerage agreements and other committed but undrawn or partly drawn facilities) changed over the past three months?

Table 11

(in percentages, except for the total number of answers)

Financial leverage	Decreased considerably	Decreased somewhat	Remained basically unchanged	Increased somewhat	Increased considerably	Net percentage Mar. 2019	Net percentage Jun. 2019	Total number of answers
Hedge funds								
Use of financial leverage	0	5	90	0	5	**0**	**0**	21
Availability of unutilised leverage	0	0	100	0	0	**0**	**0**	20
Insurance companies								
Use of financial leverage	0	0	96	4	0	-6	-4	23
Investment funds (incl. ETFs), pension plans and other institutional investment pools								
Use of financial leverage	0	0	100	0	0	**0**	**0**	23

Note: The net percentage is defined as the difference between the percentage of respondents reporting "decreased considerably" or "decreased somewhat" and those reporting "increased somewhat" and "increased considerably".

1.5 Client pressure and differential terms for most-favoured clients

How has the intensity of efforts by [counterparty type] to negotiate more favourable price and non-price terms changed over the past three months?

How has the provision of differential terms by your institution to most-favoured (as a consequence of breadth, duration, and extent of relationship) [counterparty type] changed over the past three months?

Table 12

(in percentages, except for the total number of answers)

Client pressure	Decreased considerably	Decreased somewhat	Remained basically unchanged	Increased somewhat	Increased considerably	Net percentage Mar. 2019	Net percentage Jun. 2019	Total number of answers
Banks and dealers								
Intensity of efforts to negotiate more favourable terms	0	0	89	11	0	-11	-11	28
Provision of differential terms to most-favoured clients	0	0	96	4	0	-6	-4	25
Hedge funds								
Intensity of efforts to negotiate more favourable terms	0	0	80	20	0	-15	-20	20
Provision of differential terms to most-favoured clients	0	0	89	11	0	-8	-11	19
Insurance companies								
Intensity of efforts to negotiate more favourable terms	0	0	82	18	0	-16	-18	28
Provision of differential terms to most-favoured clients	0	0	92	8	0	-6	-8	25
Investment funds (incl. ETFs), pension plans and other institutional investment pools								
Intensity of efforts to negotiate more favourable terms	0	0	85	15	0	-17	-15	27
Provision of differential terms to most-favoured clients	0	0	96	4	0	0	-4	24
Non-financial corporations								
Intensity of efforts to negotiate more favourable terms	0	0	81	19	0	-22	-19	26
Provision of differential terms to most-favoured clients	0	0	91	9	0	-13	-9	23

Note: The net percentage is defined as the difference between the percentage of respondents reporting "decreased considerably" or "decreased somewhat" and those reporting "increased somewhat" and "increased considerably".

1.6 Valuation disputes

Over the past three months, how has the [volume/ duration and persistence] of valuation disputes with [counterparty type] changed?

Table 13

(in percentages, except for the total number of answers)

Valuation disputes	Decreased considerably	Decreased somewhat	Remained basically unchanged	Increased somewhat	Increased considerably	Net percentage Mar. 2019	Net percentage Jun. 2019	Total number of answers
Banks and dealers								
Volume	0	0	93	7	0	-11	-7	28
Duration and persistence	0	4	96	0	0	+5	+4	28
Hedge funds								
Volume	0	0	95	5	0	-8	-5	21
Duration and persistence	5	0	90	5	0	0	0	21
Insurance companies								
Volume	0	0	100	0	0	0	0	26
Duration and persistence	0	8	92	0	0	+12	+8	26
Investment funds (incl. ETFs), pension plans and other institutional investment pools								
Volume	0	4	92	0	4	0	0	26
Duration and persistence	4	0	96	0	0	+6	+4	26
Non-financial corporations								
Volume	0	7	93	0	0	+11	+7	27
Duration and persistence	4	0	93	4	0	0	0	27

Note: The net percentage is defined as the difference between the percentage of respondents reporting "decreased considerably" or "decreased somewhat" and those reporting "increased somewhat" and "increased considerably".

2 Securities financing

2.1 Credit terms by collateral type for average and most-favoured clients

Over the past three months, how have the [maximum amount of funding/ maximum maturity of funding/ haircuts/ financing rate/spreads/ use of CCPs] under which [collateral type] are funded changed for [average] clients (as a consequence of breadth, duration, and extent of relationship)?

Table 14

(in percentages, except for the total number of answers)

Terms for average clients	Decreased considerably	Decreased somewhat	Remained basically unchanged	Increased somewhat	Increased considerably	Net percentage Mar. 2019	Net percentage Jun. 2019	Total number of answers

Terms for average clients	0	0	100	0	0	**0**	**0**	22
Terms for most-favoured clients	0	0	100	0	0	**0**	**0**	22

Note: The net percentage is defined as the difference between the percentage of respondents reporting "tightened considerably" or "tightened somewhat" and those reporting "eased somewhat" and "eased considerably". "Domestic government bonds" are euro-denominated government bonds issued by the government of the country where a respondent's head office is.

2.2 Demand for funding, liquidity and disputes by collateral type

Over the past three months, how has demand for funding of [collateral type/ all collateral types above] by your institution's clients changed?

Over the past three months, how has demand for [term funding with a maturity greater than 30 days] of [collateral type/ all collateral types above] by your institution's clients changed?

Table 19

(in percentages, except for the total number of answers)

Demand for lending against collateral	Decreased considerably	Decreased somewhat	Remained basically unchanged	Increased somewhat	Increased considerably	Net percentage		Total number of answers
						Mar. 2019	Jun. 2019	
Domestic government bonds								
Overall demand	0	12	82	6	0	+13	+6	17
With a maturity greater than 30 days	0	6	82	12	0	0	-6	17
High-quality government, sub-national and supra-national bonds								
Overall demand	0	11	85	4	0	+16	+7	27
With a maturity greater than 30 days	0	4	85	11	0	-5	-7	27
Other government, sub-national and supra-national bonds								
Overall demand	0	8	88	4	0	+11	+4	26
With a maturity greater than 30 days	0	4	88	8	0	0	-4	26
High-quality financial corporate bonds								
Overall demand	0	13	83	4	0	+19	+9	23
With a maturity greater than 30 days	0	4	87	9	0	0	-4	23
High-quality non-financial corporate bonds								
Overall demand	0	21	75	4	0	+29	+17	24
With a maturity greater than 30 days	0	13	79	8	0	+12	+4	24
High-yield corporate bonds								
Overall demand	0	15	80	5	0	+21	+10	20
With a maturity greater than 30 days	0	5	85	10	0	0	-5	20
Convertible securities								
Overall demand	0	0	94	6	0	0	-6	18
With a maturity greater than 30 days	0	0	94	6	0	0	-6	18
Equities								
Overall demand	0	16	80	4	0	+16	+12	25
With a maturity greater than 30 days	0	8	88	4	0	+5	+4	25
Asset-backed securities								
Overall demand	0	10	86	5	0	+13	+5	21
With a maturity greater than 30 days	0	5	86	10	0	0	-5	21
Covered bonds								
Overall demand	0	4	92	4	0	+6	0	24
With a maturity greater than 30 days	0	0	92	8	0	-6	-8	24
All collateral types above								
Overall demand	0	13	83	4	0	+18	+9	23
With a maturity greater than 30 days	0	4	87	9	0	0	-4	23

Note: The net percentage is defined as the difference between the percentage of respondents reporting "decreased considerably" or "decreased somewhat" and those reporting "increased somewhat" and "increased considerably". "Domestic government bonds" are euro-denominated government bonds issued by the government of the country where a respondent's head office is.

2.2 Demand for funding, liquidity and disputes by collateral type (continued)

Over the past three months, how have liquidity and functioning of the [collateral type/ all collateral types above] market changed?

Table 20

(in percentages, except for the total number of answers)

Liquidity and functioning of the collateral market	Deteriorated considerably	Deteriorated somewhat	Remained basically unchanged	Improved somewhat	Improved considerably	Net percentage		Total number of answers
						Mar. 2019	Jun. 2019	
Domestic government bonds								
Liquidity and functioning	0	18	76	6	0	**+13**	**+12**	17
High-quality government, sub-national and supra-national bonds								
Liquidity and functioning	0	7	85	7	0	**0**	**0**	27
Other government, sub-national and supra-national bonds								
Liquidity and functioning	0	8	92	0	0	**+11**	**+8**	26
High-quality financial corporate bonds								
Liquidity and functioning	0	4	91	4	0	**0**	**0**	23
High-quality non-financial corporate bonds								
Liquidity and functioning	0	4	92	4	0	**0**	**0**	24
High-yield corporate bonds								
Liquidity and functioning	0	5	86	5	5	**-7**	**-5**	21
Convertible securities

Duration and persistence	0	5	95	0	0	**0**	**+5**	21
Total return swaps referencing non-securities								
Volume	0	5	95	0	0	**0**	**+5**	20
Duration and persistence	0	0	100	0	0	**0**	**0**	20

Note: The net percentage is defined as the difference between the percentage of respondents reporting "decreased considerably" or "decreased somewhat" and those reporting "increased somewhat" and "increased considerably".

3.2 Changes in new or renegotiated master agreements

Over the past three months, how have [margin call practices/ acceptable collateral/ recognition of portfolio or diversification benefits/ covenants and triggers/ other documentation features] incorporated in new or renegotiated OTC derivatives master agreements put in place with your institution's clients changed?

Table 26

(in percentages, except for the total number of answers)

Changes in agreements	Tightened considerably	Tightened somewhat	Remained basically unchanged	Eased somewhat	Eased considerably	Net percentage		Total number of answers
						Mar. 2019	Jun. 2019	
Margin call practices	0	7	93	0	0	+11	+7	27
Acceptable collateral	0	7	78	11	4	-5	-7	27
Recognition of portfolio or diversification benefits	0	0	96	4	0	-5	-4	26
Covenants and triggers	0	4	92	0	4	0	0	26
Other documentation features	0	12	88	0	0	+16	+12	26

Note: The net percentage is defined as the difference between the percentage of respondents reporting "tightened considerably" or "tightened somewhat" and those reporting "eased somewhat" and "eased considerably".

3.3 Posting of non-standard collateral

Over the past three months, how has the posting of non-standard collateral (for example, other than cash and high-quality government bonds) as permitted under relevant agreements changed?

Table 27

(in percentages, except for the total number of answers)

Non-standard collateral	Decreased considerably	Decreased somewhat	Remained basically unchanged	Increased somewhat	Increased considerably	Net percentage		Total number of answers
						Mar. 2019	Jun. 2019	
Posting of non-standard collateral	0	4	84	12	0	-12	-8	25

Note: The net percentage is defined as the difference between the percentage of respondents reporting "decreased considerably" or "decreased somewhat" and those reporting "increased somewhat" and "increased considerably".
